

AIR SYSTEM PROTECTORS

WABCO ASP – Silver Cartridge

The same high quality desiccant material used in Wabco Air Dryers with **excellent drying performance** and **high mechanical reliability** *plus* a **Coalescing Fleece Filter** to **remove oil aerosols**.

Recommended for **improved protection to the compressed air and braking system**.

Available up to 13 Bar applications with M 39*1.5 and G 1 1/4" thread size.

WABCO ASP PLUS – Gold Cartridge

Two desiccant materials for the highest drying performance and two **Coalescing Fleece Filters** before and after the desiccant for optimal oil particle removal, providing **50% extended lifetime**.

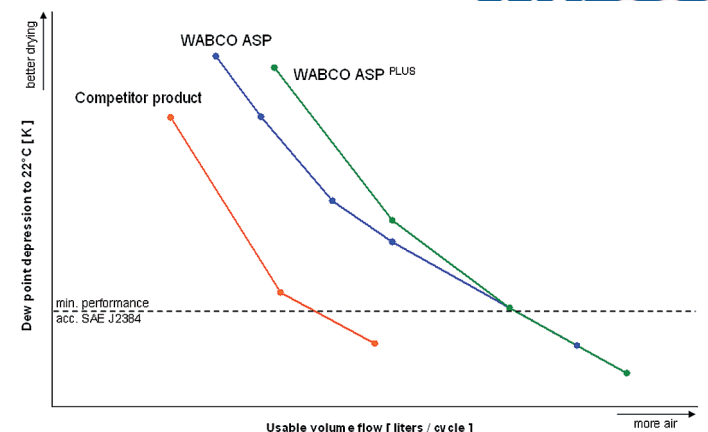

Recommended for **vehicles with high air consumption**.

Available up to 13 Bar applications with M39*1.5 thread size.

HOW ASPs WORK

COALESCING FILTERS – the solution for improved compressed air quality!

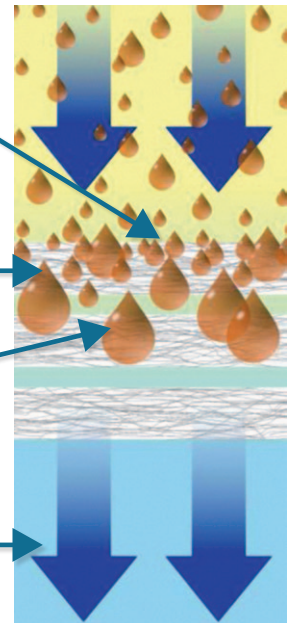

WHAT IS THE COALESCING EFFECT?

Droplets are captured by the filter coalescing fleece, compressed air is cleaned from oil aerosols.

The coalescing effect merges fine aerosols into compact droplets.

If one of the coalescing fleece filter layers is saturated, surplus oil can drip off to the next layers.

Droplets are too large and heavy to be carried forward by the compressed air flow.

LONG LIFE COALESCING FILTERS – WABCO GOLD TECHNOLOGY
